

Access Modifiers

```
class Default {  
    void display1() {  
        System.out.println("You are using Default access  
specifier");  
    }  
}
```

```
class Private {  
    void display2() {  
        System.out.println("You are using Private access  
specifier");  
    }  
}
```

```
public class AccessModifiers{  
    public static void main(String[] args) {  
        System.out.println("Default Access Specifier");  
        //default  
        Default obj1 = new Default();  
        obj1.display1();  
        //private  
        System.out.println("Private Access Specifier");  
        Private obj2 = new Private();  
        obj2.display2();  
    }  
}
```
